1. Sign-in and access control
Employees sign in with their work email and PIN. The system provides different screens and actions for managers and staff.
2. Team and role management
Managers can manage employee and job-role information, including adding or importing staff.
3. Shift scheduling
Managers configure shift patterns and scheduling rules, manage shifts, and generate weekly rosters. The system can also identify roster gaps.
4. Leave management
Staff can submit leave requests. Managers can review requests, preview which shifts may need cover, then approve or reject them. When approved leave affects an upcoming shift, the system opens a cover case for it.
5. Shift-cover offers
Managers can review eligible replacement candidates and send them offers. Staff can accept or decline offers. The first staff member to accept gets the shift; other outstanding offers expire.
6. Dashboard and notifications
Managers can see cover cases, pending offers, leave requests, and scheduling activity. Staff receive in-app notifications and can view their inbox.
How the parts work together
Staff or manager → React web app → FastAPI backend → business rules and permissions → PostgreSQL database → response and in-app notifications
The web app displays each role's screens. The backend handles requests, applies the scheduling and cover rules, and reads or updates the database.

LEAVE COVER DESK
Someone is on leave.
The shift still opens.
Managers send cover offers to the colleagues who fit. The first to accept gets the shift and everyone is told.
